South East Asian Zoos Association

The legs of the serval are the longest in relation to body size of any cat.

How to Help Save Animals from Extinction: 10 Steps (with Pictures)

Investigation: We work with vet and bear-care teams, field officers and a network of research scientists, university students, pathologists and traditional medicine doctors to investigate the bear bile industry, the trade in cats and dogs for their meat , and cruelty to animals in captivity — and use this knowledge to fight against these practices. The between the two continents is debated. It is the largest bird in Australia and the only living member of the genus Dromaius.

Driver Ant Red Driver Ant Dorylus helvolus.

Donate

It belongs to the subfamily Bovinae, the members of which are known as bovids. Its eyes are round and owl-like, and the head is round with tiny ears obscured by fur.

Donate

The Snow Leopard is also intentionally hunted for its fur, as well as for other body parts that are used in Traditional Chinese Medicine as a substitute for much more rare tiger parts, including bones, claws meat and sexual organs. The Slow Loris' fore and rear limbs are similar in size, it only weighs about 2 pounds. Many s in and around the bay aim to protect its biological diversity.

Asia: Physical Geography

This led to the desire to create some form of governing body that could set standards for all types of zoos across the region. Physical boundaries

include oceans, cliffs, or valleys.

Himalayas

The International Union for Conservation of Nature IUCN classifies the Indian Rhinoceros as a vulnerable species, but luckily its population is increasing. The second contributing factor to the problems of the zoos is that most of the natural environment of the animals that live in Southeast Asia 58% of all animal species in the world is being destroyed by deforestation and rapid development.
