Summary of Changes in Sec. Increases the minimum clearances for new installations of open conductors and service drops to match those in NFPA 70E-2000.

### Homepage

There are over 3,000 compartments on an aircraft carrier that will be spraypainted at least twice during the course of construction. Branch Circuits--Ground-Fault Circuit-Interrupters for Employees Introduction. See the detailed explanation, later in the preamble, discussing the rationale for this provision, which requires a written assured equipment grounding conductor program where ground-fault circuit-interrupters are not available.

### Homepage

. Most of these have 8 to 12 discrete inputs, 4 to 8 discrete outputs, and up to 2 analog inputs.

### Home Monitors & Monitor Accessories

During the development of the proposal, OSHA had considered including NFPA 70E's Assured Grounding Program or the construction standard's assured equipment grounding conductor program requirements as alternatives to GFCIs, but rejected them. Summary and Explanation of the Final Standard This section discusses the important elements of the final standard, explains the purpose of the individual requirements, and explains any differences between the final standard and the existing standard. It noted that employers performing shipbuilding and ship repair use temporary wiring to provide power to the ships that arrive at the shipyard, stating: During construction and major overhaul of a vessel, ship and shore-based electrical installations may be interconnected.
