## Dietary restriction : implications for the design and interpretation of toxicity and carcinogenicity studies

CREA was significantly lower in the group fed the 50% NK603 + Roundup diet than in the group fed the 33% NK603 + Roundup diet. Here we assumed regulatory sample sizes equal to the replication, i.

## Redbook 2000: IV.C.6. Carcinogenicity Studies with Rodents

Either a 21-day dermal Guideline 82-2; EPA, 1984 or a 90-day dermal study Guideline 82-3; EPA, 1984 would be required not conditionally required as in the past to support all registrations. This indicates that the analytical methods used in the current and historical study were not comparable, and therefore, the historical data were not considered suitable to be used for equivalence tests see details in Goedhart and van der Voet.

## Antitumor effects of THC.

Thus, based on these many findings from rat studies that have involved both genders of a spectrum of rat strains, it has been generally accepted that CR slows the rate of aging. Blood samples should be drawn at the end of the fasting time and before feeding.

## 4 METHODS FOR TOXICITY TESTING

Am J Clin Nutr 2009; 89 6 : 1997S—12008. There have been no published reports of the teratogenic effects of vitamin D on humans.
