## Exploring the self

With the spread of convenience foods, freezers and microwave ovens, little time or skill are needed to prepare an individual meal.

## The EU Environment Situation and Prospects — European Environment Agency

This is not the only way of thinking about the various activities that surround production and consumption. Traditional social forms such as the extended family, and even the nuclear family, are breaking down. As the main policy activities are happening within each of the corridors, it seems most logical to derive such a set of overall EU sustainability headline indicators from the existing initiatives, instead of trying to develop a separate set of indicators to go with the sustainability strategy.

## Environmental Project, 904

The European Council, at its Summit in Cardiff in 1998, requested the Commission and the transport ministers to focus their efforts on developing integrated transport and environment strategies. While some of them discuss issues such as migration and ageing as factors that help to shape consumption, their projections, e. The environmental implications of these trends are not clear.

## The EU Environment Situation and Prospects — European Environment Agency

Residential energy use per capita varies widely among European countries, from 150-350 kWh in Portugal, Spain and Greece, through 500-700 kWh in most of northwest Europe, to over 700 kWh in Scandinavia. And will it become stronger on targets and indicators to measure progress? Mediterranean countries, along with the Republic of Ireland, saw slower and patchier economic development, and were affected badly by the 1930s depression and the Second World War.
