The use of low-shrinkage polyester resins can minimize this pattern so that moldings will not have to be sanded smooth before painting.

Molding Epoxy molding compounds powdered, partially cured mixtures of resin and curing agent which become fluid when heated are used for the production of all kinds of structural parts. Fillers and reinforcing agents are easily incorporated into epoxy resins to make molding compounds. The epoxy resins provide low shrinkage, good bonds to fillers and reinforcing agents, chemical stability, and good flow properties [5].
