The first part deals with the fundamentals of acoustics including how sound levels are described and measured, and human response to sound. Readings and class discussions examine course themes in a comparative framework and consider their implications for architectural design, education, and professional practice. Each lecture will delve deeply into one or two buildings to examine program, spatial organization, graphic representation, critical building details, construction technology, and the relationship of the case study building with regard to other contemporary structures and the architect's overall body of work.
