The global livestock agenda: Opportunities and challenges

This report provides recommendations on how to better manage ongoing changes in livestock development.

Livestock sector development and implications for rural poverty alleviation in India

Each household is categorized according to their level of food insecurity on the basis of an additive score number of affirmative answers to scale questions and recommended cutoffs.

Urbanization, livestock systems and food security in developing countries: A systematic review of the literature

assets are regarded as being critical aspects of well-being. Agriculture is a major contributor to global warming through massive emissions of greenhouse gases ,. Another characteristic of this literature is that there are, so far, very few comprehensive models to serve as a basis for, and integration of, empirical evidence.

Beyond milk, meat, and eggs: Role of livestock in food and nutrition security

Times have changed and most young boys go to school Siefert and Opuda-Asibo 1994 so they have to tether the goats, preferably near the homestead where someone at home can keep an eye on them. Furthermore, this segment of the reviewed literature addressed the adaptation processes that livestock producers undergo to adjust to different situations or conditions e.

Beyond milk, meat, and eggs: Role of livestock in food and nutrition security

Education on the importance of animal source foods and quantities required for improved nutrition status has to be provided before the farmers fully exploit their livestock resource for better health and wellbeing. Depending on the thematic focus — environment and climate, public health and life expectancy, malnutrition and critical access to food — definitions differ. Several empirical studies indicate that livestock rearing has significant positive impact on equity in terms of income and employment and poverty reduction in rural areas Singh and Hazell 1993; Adams and He 1995; Birthal and Singh 1995; Thornton et al 2002; Birthal and Ali 2005 as distribution of livestock is more egalitarian compared to land Taneja and Birthal 2004.

Environmental impacts of food production

The massive increase in demand for livestock products witnessed over the past few decades has created equally significant opportunities for smallholders who raise animals to meet that demand and to benefit as a result. The growth in meat production has been faster as compared to milk production.

Food Security and the 2015

The world currently produces enough food, in aggregate terms, for its citizens.
