Technology and the World Economy: The Case of the American Hemisphere

Despite these differences, a basic solidarity is evident in their international actions, and the region is perceived by the rest of the world as This paper was written on the basis of a draft by Zoltan Szabo. They would benefit from participating with advanced countries in developing applications of state-of-the-art technologies.

Technology and the World Economy: The Case of the American Hemisphere

By 1975 manufacturing production in the region began to slow, and in the early 1980s there was a clear recession Schwartz, 1983. While those countries took the lead and assumed a growing weight in the world economy, the countries of Latin America lagged behind.

Technology and the World Economy: The Case of the American Hemisphere

As the region lost the advantages of the existing international division of labor, trade became more asymmetrical and development more subject to changes in the markets of industrialized countries. From a strictly economic standpoint, the heightened struggle between the two superpowers diverts resources that both countries could more usefully apply to the problems of their relationships with other countries. The region saw the beginning of a policy of developing nontraditional exports, particularly manufactured goods.

Technology and the World Economy: The Case of the American Hemisphere

Technology and the World Economy: The Case of the American Hemisphere ENRIQUE MARTÍN DEL CAMPO WE LIVE IN A COMPLEX INTERNATIONAL setting in which technology has an ever-growing influence on the world economy. Nevertheless, in designing a program to develop a local capacity in basic and applied science, these factors should be taken into account: First, the region as a whole already has scientific capabilities that provide a basis for initiating the proposed projects. The Latin American average was less than one-third of the U.
