GEOGRAPHY AND PHYSICAL FEATURES OF NEPAL

Typically, the ratio of males to females, known as the sex ratio, is 1 to 1 and population pyramids will have even sides. Carpet and garment manufacturing has increased significantly, providing foreign exchange. Hinduism is a polytheistic religion with a wide variety of individual beliefs and practices.

Cultural geography

The Nepalese culture is closely related to the culture of the more massive Indian Sub-continent and is influenced by the cultures of India and Tibet. It left over three million people without a home in Pakistan alone and more people were left homeless in neighboring areas. Weakened monsoon rains likely led to drought conditions and even small changes in precipitation and climate can have a devastating effect on a population of five million.

South Asia

The focus is on the spatial relationships within any field of study, such as regional economics, resource management, regional planning, and landscape ecology. However, most of these follow the same pattern.
