## Universal Health Coverage and Primary Health Care within the Covid

Ministry of Health, Social Services and Equality Spain. The role of financing requires further research in different country contexts.

## Task shifting from physicians to nurses in primary care in 39 countries: a cross

In the USA, as of 2015, 22 states plus DC have removed legislative barriers for NPs; however, 28 states still have restrictive scope-of-practice laws in place. The health visitor lays out and explains each of the cards, inviting parents to select topics cards of the most immediate relevance and importance.

## Promoting early infant development

Australian Institute of Health and Welfare.

## Task shifting from physicians to nurses in primary care in 39 countries: a cross

In its Global Strategy on Human Resources for Health 2030, the World Health Organization highlighted the need to maximise the potential for mid-level practitioners to enhance workforce capacity. It should be universally accessible to individuals and families by means acceptable to them, with their full participation and at a cost that the community and country can afford. Wave Trust: Croydon, Surrey, 2011.

## Promoting early infant development

A3: Over the past 11 months, the important played by primary health care providers in responding to the novel coronavirus has become clear. Globally, developing standardised titles, and adding those to the International Standard Classification of Occupation system, would improve data availability and monitoring. Research shows that its use improves the accuracy of the assessment of family needs.

**WHO/Europe**

In our study, we assessed both the level of advanced practice and the educational dimension, unlike previous surveys that focused on titles or education only but missed levels of advanced practice. Once achieved, the materials allow practitioners to be able to concentrate on guiding, listening and focusing parents on key developmental topics.
