5. Diseases and Disorders

Laboratory testing for grapevine virus diseases. Red Raspberries: Because the most productive portion of red raspberry canes is the top third of the cane, trellising is strongly recommended rather than pruning the plants into hedgerows.

Disease of Small by R. H. Converse

For shoots greater than 1 foot long and up to 2 feet long, leave two clusters on that shoot. Recommended raspberry cultivars for North Carolina yield in the North Carolina piedmont may decline in time due to stress.

Disease of Small by R. H. Converse

Impact of Pineapple mealybug wilt associated virus-2 and mealybug wilt of pineapple in Hawaii. Tall fescue, perennial ryegrass, St.

5. Diseases and Disorders

AGVd and GLVd are latent in grapevine and hence appear to be economically insignificant. Pythium aphanidermatum fungus-like water-mold Any turf Sp to early F Many forms. Consider the difference between organic and inorganic.

Disease of Small by R. H. Converse

Set the rest of the plants 6 inches apart. Affected leaves will curl and be distorted. Newly developed molecular diagnostic reagents and procedures that allow better characterization of diverse fruit tree, small fruit and grapevine pathogens will also be distributed.
