Note that half-life is not half the amount of time it takes for the entire sample to decay, especially because the first half of the sample usually decays faster than the second half. Virtually all living organisms except some microbes incorporate only the L-forms, but once the organism dies the L-amino acids gradually convert to D-amino acids.

Aquifer, Secondary: Any aquifer that is not the main source of water to wells in a given area. The fusion of disciplines under the umbrella of earth science allows a multidisciplinary approach to solving complex problems or multi-faceted issues of resource management. This release can blow the drill string and drilling fluid out of the well, followed by a rush of water,.
