However, so have the complexities.

Transthoracic pacing during CPR

Reading will encourage your mind and thoughts. The advances in pacing have been huge. Pacemaker indications in these 21 cases included electromechanical dissociation in four cases, asystole in 10 cases, pulseless idioventricular rhythm in five cases, and 3 degree heart block in two cases.

Practical approach makes new ESC Cardiac Pacing and Cardiac Resynchronization Therapy Guidelines accessible to all

All patients had failed to respond to conventional chronotropic and inotropic agents prior to pacemaker insertion.
