But there is one thing we must never do: We must never give up our rights, never!! But the wide net of exercise physiology is best understood by breaking down your options into two primary categories: clinical and non-clinical. The disadvantages of this strategy are that the data must follow the standard Normal distribution, and that the influence function does not work well with non-stationary data, that is, when the parameters such as the mean, standard deviation and correlation vary over space or time.
