## Construction Waste Management

Contact local and community organizations schools, youth groups, community service groups, , others similar. The Waste Management Plan, therefore, should also include progress reporting procedures to record actual diversion and cost corresponding to each diversion and cost estimate. Best Management Practices How waste management, or diversion, is accomplished, and to what extent, depends on specific project requirements and conditions.

## Construction Waste Management

Management Most construction and demolition debris is generated at the project level and therefore subject to laws and regulations by local, state, provincial, and federal laws. Landclearing Debris: Waste generated from the process of clearing land, including preparing building sites for construction, generally consisting of vegetation, soil, rocks, and constituent matter.

A

Diversion: The practice of diverting waste from disposal in a landfill, by means of eliminating or minimizing waste, or reuse of materials.

## Construction Time Card & Project Management Software

Direct subcontractors and trades to collect and keep scrap at cutting and fabricating locations. Cardboard and paper are usually baled for economical transport to paper and cardboard mills.

A

Disposition Level—Management of diversion and disposal The disposition level encompasses the segregation, sorting, handling, transporting and final disposition of wastes, and is administered by the businesses and agencies responsible for disposal under contract or agreement, under licenses, and in accordance with all laws and regulations. Generally plastics are not recycled into material of the same type and grade downcycled.

## Construction Time Card & Project Management Software

For example, durable modular metal form systems for use in concrete construction may be selected on the basis of being readily demountable and reusable on other projects, thus eliminating wood waste associated with formwork fabricated of plywood and dimensional lumber. They can use technology to communicate production and safety goals and use electronic plans to illustrate what to do on-screen, helping them to be more effective leaders.

## **A**

Collect paints and liquids from almost-empty containers; avoid disposing of useable materials simply because there is not enough in one container to finish a job. Carpeting is generally picked from stockpiles on the receiving floor, and deposited in containers for transport to manufacturers who can make use of the fiber materials to make new products.

### **Construction Time Card & Project Management Software**

Usually destined for reuse: Doors, windows, hardware: these materials often have value in a secondary market when one is available.
