

# Assessment of air pollution effects on human health in Ontario

Economics & Forecasts Division, Corporate Planning Branch, Ontario Hydro - Cumulative effects assessment in air approvals

Description: -

-  
Environmentally induced diseases -- Ontario.  
Environmental health -- Ontario.  
Environmental Health -- Ontario.  
Air Pollutants, Environmental -- adverse effects.  
Air -- Pollution -- Ontario.  
Air -- Pollution -- economics -- Ontario.  
Air -- Pollution -- adverse effects.  
Air -- Pollution -- Physiological effectassessment of air pollution effects on human health in Ontario  
-assessment of air pollution effects on human health in Ontario  
Notes: Includes bibliography.

## Health impacts of air pollution

The world is currently at approximately 1°C warmer since 1880 with approximately two-thirds of that rise occurring since the mid-1950s.

### [PDF] Human health effects of air pollution.

Other aims are to prevent loss of amenity—for example, because of poor visibility or offensive odour, damage to vegetation, and corrosion of buildings and other infrastructure. Footnotes Footnote 1 California EPA 1998. There were differing perspectives on how the policy should progress, summarized below.

### Research on Health Effects from Air Pollution

How to tackle air pollution To alleviate the negative effects of atmospheric pollution on health, the World Health Organization WHO and the Climate and Clean Air Coalition CCAC — made up of the United Nations Environment Programme UNEP and 54 nations, among other agencies — launched the BreatheLife initiative.

### Halton

Bronchospasm, pulmonary edema, pneumonitis, and acute airway obstruction are the most common clinical findings associated with exposure to SO<sub>2</sub>.

### Assessing the Impacts of Traffic Air Pollution on Human Exposure and Health

Several reports have revealed the direct association between exposure to the poor air quality and increasing rate of morbidity and mortality mostly due to cardiovascular and respiratory diseases.

## **WHO/Europe**

In fact, a substantial ecological recovery has occurred since the superstack was commissioned in 1972. Because O<sub>3</sub>-related damage to vegetation occurs over extensive areas of North America, it is by far the most important air pollutant in agriculture. Nitrogen oxides NO and NO<sub>2</sub> Nitrogen oxide NO and are produced primarily by the transportation sector.

## **Ontario Residents neglected by provincial air pollution laws**

Collaboration will ensure that more local concerns can be taken into consideration when identifying key air quality challenges, and that the management actions identified meet community needs while improving air quality. These concentrations are well within the range at which O<sub>3</sub> can cause acute injury to plants, which is why O<sub>3</sub> is such an important air pollutant.

## **Dr. Hong Chen**

Conclusions and recommendations Air pollutions have major impacts on human health, triggering, and inducing many diseases leading to high morbidities and mortalities, particularly in the developing countries such as Iran. These efforts of reclamation, along with the natural regeneration that has occurred because of the greatly decreased pollution since the superstack was built, have helped to greatly improve degraded habitats in the Sudbury region.
