The Paleontology Portal

The pre-Mississippian rocks of the NE Brooks Range are crosscut by a suite of Late Devonian intrusive bodies e. Both of these samples were collected from isolated talus slopes, so their stratigraphic positions within the greater pre-Mississippian succession remain somewhat ambiguous.

BOURDIER - Le gisement interglaciaire à Rhododendron ponticum L.

Trilobites from the Lower Member of the Gualcamayo Formation

Since 1952 it has been the territorial capital. A pilgrimage to the dawn of life. KOSTER - Eolische verschijnenselen in actuele periglaciale milieus.

Yukon Territory, Canada

The youngest single-grain age is 426 ± 3 Ma 1σ , and a cluster of four ages, which overlap in age at 1σ , yield a weighted mean age of 439 ± 3 Ma 1σ . These strata are overlain by a Lower Ordovician—Lower Devonian succession of fine-grained siliciclastic turbidites, herein referred to as the Clarence River group, which records a prominent shift in provenance most likely associated with the onset of the Caledonian-Appalachian orogeny in northeast Laurentia. Geological Survey of Canada, Bulletin 68; 41 pp.

The Paleontology Portal

It is observed that the abundances of Ir and other siderophile and chalcophile elements e.
