How technology is leading us to new climate change solutions

Competition intensifies, putting a premium on innovation. We now need to have a policy conversation about how to make the most effective use of the precious radio spectrum, and to close the digital access divide for underserved rural, low-income, developing areas populations.

Science, Technology and Society

The report groups the resulting discussion under six broad themes: science in transition; communication and education; North-South issues; economics versus sustainable development; science policy and ethics; and integrating issues.

8 Trends in Global Science and Technology and What They Mean for Intellectual Property Systems

Why do you think it is important? For Russia, the formation of new global regimes and institutions, as well as the harmonization of emerging technologies development is unavoidable and necessary, considering both the asymmetry of potential and major disruption risks. More positively, the disruption has caused an acceleration of remote working, and a rapid focus on evaluating and de-risking the end-to-end value chain.

The Impact of the Internet on Society: A Global Perspective

These issues require appropriate policy discussions in order to bridge the gap between data collection and meaningful outcomes. How will the development of more advanced software affect our economy? Emphasizes the development of methods and historiographic approaches for studying these themes.
