History of Chemistry

Boyle was an atomist, but favoured the word corpuscle over atoms. His work describes the highly developed and complex processes of mining metal ores, metal extraction and metallurgy of the time. His study established that any particular droplet's electrical charge is a multiple of a definite, fundamental value — the electron's charge — and thus a confirmation that all electrons have the same charge and mass.

History Of Chemistry Timeline

A Short History of Chemistry book by James Riddick Partington

In 1865, began work on , a milestone in modern industrial organic chemistry which revolutionized the dye industry. In 1921, and established the concept of quantum mechanical spin in subatomic particles. Bulletin for the History of Chemistry.

History of Chemistry

Priestley also discovered that the gas produced by fermenting beer, which we now know to be carbon dioxide, is the same as one of the gaseous products of combustion. He was executed on the guillotine at age 51, prematurely terminating his contributions to chemistry.
