#Frequently #Asked #Questions

The 10 largest public and philanthropic funders of health research in the world: what they fund and how they distribute their funds

Further, there is the question of the extent to which grant-giving bodies should relinquish some of their control over the course of science. However, in many cases there remain sound reasons to give the work to FFRDCs, such as avoiding potential conflicts of interest, access to confidential competitive information or deep historical knowledge and experience not available in for-profit companies.

Budget

In general, these services are provided at nursing stations, health centres, in-patient treatment centres, and through community health promotion programs.
