There are several genera classified in the Agaricales that are i poorly known, ii have not been subjected to DNA analysis, or iii if analysed phylogenetically do not group with as yet named or identified families, and have not been assigned to a specific family i.

## Agaricales

Fries later elevated several of these tribes to generic level, but later authors—including , , , and Staude—made most of the changes. A recent 2006 large-scale study by Brandon Matheny and colleagues used representing six regions from 238 species in 146 genera to explore the phylogenetic grouping within the Agaricales.
