

# Non-insulin-dependent (type 2) diabetes - January 1980 through December 1982, 191 citations

U.S. Dept. of Health and Human Services, Public Health Service, National Institutes of Health - Regulation of energy substrate metabolism in the diabetic heart

Description: -

- Italian language -- Dialects -- Brazil -- Rio Grande do Sul -- Texts  
Folk poetry, Italian -- Brazil -- Rio Grande do Sul  
Diabetes -- Bibliography. Non-insulin-dependent (type 2) diabetes -  
January 1980 through December 1982, 191 citations

- Literature search -- no. 82-28 Non-insulin-dependent (type 2)  
diabetes - January 1980 through December 1982, 191 citations  
Notes: At head of title: National Library of Medicine.  
This edition was published in 1983

## Diabetes and the risk of sudden cardiac death, the Atherosclerosis Risk in Communities study

Laparoscopic procedures were performed for 60 patients 24 women and 36 men with a mean age of 51. The basal level of phosphorylation of TBC1D1 on Ser 231, Ser 660 and Ser 700 was significantly reduced in muscles from AMPK $\alpha$ 2i TG mice, demonstrating that even low levels of AMPK activity, which are found in the unstimulated or resting condition, are necessary to maintain TBC1D1 phosphorylation in the muscle. It also is likely that type 2 diabetes is multigenic, meaning that different combinations of gene polymorphisms may exist among patients.

## The cochlea of the spontaneously diabetic mouse

. Incalzi RA, Fuso L, Pitocco D, et al. If symptoms do not resolve in a few minutes, rather than a TIA, the event could be a stroke.

## The cochlea of the spontaneously diabetic mouse

This included WT TBC1D1, TBC1D1 mutated on four predicted AMPK phosphorylation sites Ser 231, Thr 499, Ser 660 and Ser 700 to alanine 4A mutant and TBC1D1 mutated on each site individually. INTERNATIONAL JOURNAL OF EPIDEMIOLOGY Pollack, C. Age-standardized CHD incidence was 1.

## Regulation of energy substrate metabolism in the diabetic heart

This distorts measurement of the outcome of interest because its effect size is mixed with the effects of other extraneous factors.

## Regulation of energy substrate metabolism in the diabetic heart

For all patients, the complication rate was 1. With input from instructors and students, we developed a 10-lesson experiential Public Health

Advocacy Curriculum that uses classroom-based activities to teach high school students about the upstream causes of health and engages them in community-based health advocacy.
