Typically, nuclear power plants have high capital cost for building the first several plants. No meaningful preference was found. The existing fleet of nuclear power plants is fairly old.

Nuclear Power Need and Future Outline n Economics

However, the variation is particularly crucial for electricity generation as its economics depend so much on minimising capital investment cost, which must be passed onto consumers, in contrast to roads, bridges and dams which are usually less complex.

Generation IV Designs Improve the Economics of Nuclear Power

In July 2018, the UK government and Kepco agreed to carry out a joint feasibility study on the RAB model. Economies of scale AND economies of mass production?
