Predicting hydrology in ungauged basins using the DDD model

SRC provided guidance on and contributed to organization and water turbidity measurements. The ice, snow, and firn samples are ultra-fresh Table 3. A total of 23 % of randomly chosen samples were re-measured in order to estimate the reproducibility of the results, accordingly 0.

Department of Glaciology

According to different studies, a positive trend in annual precipitation sum of 5 % per decade is reported by Alekseev et al. As a new IUGG association, it is rapidly adopting new ways of working. Interesting tidbit: this hut is a reminder from the time when border control was still in place between Italy and Austria before the Schengen agreement.

Antarctic Glaciers

In 1965 New Zealand was invited by the IHD to participate in the programme.

ShieldSquare

In addition, IASH reports Nos.
