Tags: #Synthesis #of #donor

## Total synthesis of (–)

There were some difficulties when trying to get the step 3 and 4 into the machine.

## Palladin Oleksandr V.

The carbon double bonded oxygen may be found at 1660. It was also very close to the literary melting point of 114.

## Palladin Oleksandr V.

The specific sulfonamide that was synthesized was p- morpholinosulfonyl analine.

## Palladin Oleksandr V.

Another source of error could have resulted in having a little water in the step 3 product while testing its melting point. This indicates that the product is a pure substance.

## Synthesis of donor

Some possible sources of error could be from using the HMNR. The literary melting point was 146°C which is very close to the tested melting point.
