Application development

I won't list each component and describe its use with an example—I'd rather use some of the components in a few demos and underline the architecture of IntraWeb rather than specific details. Marketing preferences may be changed at any time.

Kylix Tutorial Part 1

Enter: make all All the packages and command line tools will be compiled. In IntraWeb you invariably use a layout manager; the default is the IWLayoutMgrForm component. The author has done an perfect job explaining everything that 3.

Dr.Bob's Kylix 2 Developer's Guide BizSnap chapter (XML, SOAP and WebServices)

The software hints really boil down to 'once you have the hardware and network configuration figured out, write your app to use that', which is rather on the nose. See the following demos for examples of this technique.

Kylix Libs Packaging download

The IDE contains standard templates for many programming constructs such as an array declaration, a case statement, a for loop, a function declaration, and so on. Building Report Manager from the command line To build Report Manager from the command line in Windows you must have Borland make in the path not GNU make , for Linux GNU make is used. What's interesting, though, is that the information is displayed in a memo component created at run time see again Figure 21.

Kylix Tutorial Part 1

This example will also serve as an excuse to delve into some of the source code automatically generated by the IntraWeb application wizard. TreeContents1Click Sender: TObject ; var i: Integer; begin with TIWMemo.

The IWModuleController component provides core services for IntraWeb support. I can see how my application would look if I had actually compiled and ran it.

Borland Kylix Platform

To their credit, the Linux vendors are making every possible effort at their end to continuously improve the stability of the Linux operating system in every aspect. Usage is the same as with the original dcc compiler under Linux. New pages can be created using the Object Repository dialog, which is invoked by selecting the Tools ® Object Repository option menu.

Building Socket Applications :: Chapter 19: Internet Programming: Sockets and Indy :: Part IV: Delphi, the Internet, and a .NET Preview :: Mastering Delphi 7 :: Programming :: styleguide.expo.io

. Would you like to rate recently purchased thing? He place all the business data into his own managed bean and which is free to edit. Even though the contents are easily understandable, we do not suggest that you directly update them, because the IDE maintains it.
