Statement of the Holy See at the Second International Conference on Nuclear Security of the International Atomic Energy Agency (IAEA) (Vienna, 6 December 2016)

These practices have been regulated for decades under the aegis of the IAEA 2012. Contributed by the Pressure Vessel and Piping Division of ASME for publication in the JOURNAL OF PRESSURE VESSEL TECHNOLOGY.

A Numerical Study of Turbulent Upward Flow of Super Critical Water in a 2×2 Rod Bundle With Nonuniform Heating

Third, all-round cooperation is needed to address common challenges. Instead, the real choice is between a single secure site, deep under the ground at Yucca Mountain, or making do with what we have now or some variant of it--131 aging surface sites, scattered across 39 states.

Nanofluid Heat Transfer Enhancement for Nuclear Reactor Applications

As the excellent creep resistance and the neutron radiation resistance of ODS alloys are mainly due to the ultrafine oxide particles, melting welding methods are not applicable and should be substituted by better welding methods.

The metrology of neutron measurement in nuclear reactors

Threats to nuclear security represent serious technical and diplomatic challenges. And similarly to the parent field, nuclear materials draws together the formerly separate disciplines of metallurgy, solid-state physics, ceramics, and materials chemistry that were early devoted to nuclear applications.

Nuclear Energy Agency (NEA)

Accordingly, consistent with my responsibilities under the NWPA, today I am recommending that Yucca Mountain be developed as the site for an underground repository for spent fuel and other radioactive wastes. The measures are usually based on the significance of the material or facilities being protected. Management of waste in different steps prior to disposal e.
