Smoking Cessation – The Role of Healthcare Professionals and Health Systems

Our sample was small and it is possible that by interviewing a larger, more diverse group, we would have found other important factors relating to the use of RPIs, however, similarities inherent in the accounts we obtained, suggest that we have identified most of the major issues.

Notice on Smoking Cessation Guideline Products

Recycling — fresh quit attempt In other services smokers who have suffered a full blown relapse were encouraged to re-enter the service as a fresh quit case.

Ready to Quit

Interviewees' accounts suggest that making the client aware early on in the quit attempt of the possibility of relapse further down the quitting process may prepare the smoker for relapse and diminish the feelings of disappointment they may suffer. In: G A Bennett ed. Denver Health is a comprehensive, integrated health care system providing care for all, regardless of ability to pay, and it serves as a model for other safety-net institutions across the nation.

Smoking Cessation: Tasks for the Practice Facilitator

A motivational interview consists of three phases; the 'eliciting phase', uses the key communication strategies and aims to get the individual to clearly state their concerns about a behaviour and lead them to the point where they see that change is necessary. An understanding of the theoretical basis of communication to communities and to individuals is important for effective transmission of messages.
