Nanomaterials

Nanofoams contain a liquid or solid matrix, filled with a gaseous phase and one of the two phases has dimensions in the nanoscale.

Magnetic treated water increases the efficiency of added fertilizers. Magnetic actuation of a thermodynamically stable colloid of ferromagnetic nanoparticles in a liquid crystal.

Crystal

Obviously all permanent magnetic material will produce flux, but depending upon the working application, certain material types, grades and shapes will be more efficient than others. Crystals can help to protect against those energies.

Single crystals of Dy1

Small grains of magnetite are very common in and.
