Adenosine A2A Receptors and Parkinson's Disease

Current treatment primarily involves symptom management with dopaminergic replacement therapy. So what does it all mean? Our study demonstrated that the A2ARs in the putamen were increased in the PD patients with dyskinesia, and also suggest that the A2ARs in the putamen compensate for the asymmetrical decrease of dopamine in drug-naïve PD patients and that antiparkinsonian therapy increases the A2ARs in the putamen.
