## Cataract Surgery Complications

An experienced surgeon, however, may or may not benefit greatly from such a change in technique. The iridectomy hole is larger when done manually than when performed with a. Cataracts can cause blurry vision and increase the glare from lights.

## Cataract surgery and its complications in diabetic patients

IOLs are made of plastic, acrylic or silicone.

## Complications of cataract surgery

A person who has cataracts should talk to their doctor to find out if and when they may need surgery.

## Cataract Surgery and Its Complications

In his clear and concise style the author discusses the important aspects of the management of the cataract patient, starting with a discussion on when to operate and ending under complications with a subject that ophthalmic surgeons tend not to mention: the role of behavioral disturbances during and following cataract surgery. Cataracts are classified by where and how they develop in the eye.

## Small incision cataract surgery: Complications and mini

Those with highly myopic eyes or a history of retinopathy of premature and develop early cataracts are at an increased risk of retinal detachment following surgery. This helps determine the right type of lens implant intraocular lens, or IOL. Floaters appeared after having cataract surgery. Floaters are shadows cast on the retina of the eye by debris in the vitreous gel.

## Cataract surgery: Types, what to expect, and recovery

After phacoemulsification of the lens nucleus and cortical material is completed, a dual irrigation-aspiration I-A probe or a bimanual I-A system is used to aspirate out the remaining peripheral cortical material. Treating PCO by YAG Capsulotomy Posterior lens capsule opacification is fairly

common.
