VI of World War I was the largest bomber
ever to strike Britain. There are also
specifications of unfulfilled projects, and
descriptions of incomplete construction.

I—its engines, its propeller drive shafts, its instability on the water—were fully of its time. Its rounded nose, integral flight deck, and streamlined seaplane hull made the Ca. In designations, the manufacturer's name preceded the letter R followed by a Roman numeral, e.

Add the three towers of linen wings, and it looked a lot more like a square-rigger under full sail. The transmission of power from the centrally mounted engines to the remote, most often wing-mounted propellers proved troublesome in practice and most operational examples of Riesenflugzeug-class aircraft were of the second type, as with the all-direct-drive Zeppelin-Staaken R. The German Giants: The German R Planes, 1914 1918 by Peter M. Grosz

Dornier always worked in close consultation with his engineers to refine or completely redesign as shortcomings emerged and the work progressed. The German Giants, The Story of the R-planes 1914—1919. Digging into the German navy archives, they found a document revealing that the triplane was a project of the Brüning company, a leading plywood producer, which was asking the navy for support.
