The colonies form white, pink or orange sheets, several centimetres in diameter.

The Natural History of Puget Sound Country

Its population has increased somewhat and it can now be seen in localized areas. Flocks may overnight in protected bays and forage farther out to sea during the day. The United States of America.

Cryptosula pallasiana

Due to high amounts of excess nutrients and water disturbance, there are fewer number of benthic invertebrate species found near CSO outfalls. Wahl 2002 sparked concern over declines in marine birds in Puget Sound. This breeding population represents 121 colonies located on Vancouver Island, the British Columbia mainland, and in the Georgia Strait and Puget Sound basins.
