As at many other drill sites on the western margin of the Central Atlantic, the abundance of opal and clinoptilolite zeolite , together with the lack of palygorskite, are the characteristic features Berger and von Rad, 1972. Additional illite and kaolinite constitute less than 10% of the assemblage. A Image showing location of IODP Expedition 333, Site C0018 filled red circle in the NanTroSEIZE complex.
