Syntactic Parsing Strategies in Italian

These theories are similar in that principles are all independently motivated by grammatical considerations. Moreover, RST theory does not make non-elementary RST trees the projections of any head. Once we add heads to c-structures, however, we can prove equivalences between measures for headed c-trees and d-structures, exploiting the result in that dependency structures in which we keep track of the order of attachment are isomorphic to headed RST constituent trees.

Relative clause avoidance: Evidence for a structural parsing principle

Additionally, we report the scores for the same metrics where each span is augmented with its head edu, denoted $S + H$, $N + H$, $R + H$, and $F + H$.

Definition and Examples of Minimal Attachment Principle

We have seen that representing discourse as constituent structures raises a number of issues, both conceptual and practical. If Merger is not possible, try to Move within the current Command path.

A Minimalist Theory of Human Sentence Processing

This however, cannot be accomplished while the trace of the moved V remains in the structure because a relative clause inside the direct object would not command the verb trace.

A Dependency Perspective on RST Discourse Parsing and Evaluation

The standard evaluation procedure for RST discourse parsers is thus a simplified variant of PARSEVAL, and most RST discourse parsers use techniques that originated in syntactic constituency parsing.

Syntactic Parsing Strategies in Italian: The Minimal Chain Principle by M. de Vincenzi

The scores for this alternative RST-Parseval are given in. IP AP fell After Mary sewed the socks However, there is no way to incorporate the structure into this remnant either.

Syntactic Parsing Strategies in Italian: The Minimal Chain Principle by M. de Vincenzi

Attachment of the particle to the higher verb will cause spell-out of the phrases remaining on the c-command path of the lower clause. We note in passing however, that this theory is intended merely to be a theory of initial preference.
