Greater Newcastle metropolitan planning

In order to be able to do this, strengthening and redundancy of infrastructure such as energy, water, and heating and cooling systems are required. Thermal ground exchange or shallow geothermal energy has been increasingly used in the housing sector to sustain comfortable room temperature. However, special design requirements are needed along with the accurate costing of the proposed solution that would finally assess the feasibility of the project.

Monitoring land changes in an urban area using satellite imagery, GIS and landscape metrics

While industrialization programmes have been central to the development of Asia-Pacific states and city-regions over the past half-century, service industries are increasingly important as instruments of urban growth and change. Galloway,
