Managing threatened ungulates in logged

Modeling studies indicate that the resilience and persistence of ecosystems is closely tied to the recycling of materials through these soil food webs Moore et al. Integrated conservation and development projects seek to meet these twin goals of promoting conservation and enhancing community economic development by assisting communities in their development of sustainable uses for the wealth contained in their natural resources. To compare the effectiveness of the two survey methods to detect the focal prey species, a single dataset for both study areas combined was used to generate comparative naive detection probabilities.

The high value of logged tropical forests: lessons from northern Borneo

MacKenzie DI, Nichols JD, Sutton N, Kawanishi K, Bailey LL.

Reconciling timber extraction with biodiversity conservation in tropical forests using reduced-impact logging

The TFR has no specific wildlife management plan or prescriptions and an estimated 5,000 indigenous people reside within 24 settlements in and around the area, whereas RBSP has an estimated 740 indigenous people Department of Orang Asli Affairs unpublished data.
