Ought we re-consider the conceptualization of non-diegetic music in films and the ongoing debate regarding the term diegesis in cinematic music? Individual harmonic functions have different importance, three basic functions are traditionally distinguished: prime I, fifth V and fourth IV are the easiest intervals applying one simple rule: if the triad scale is placed on the scale of defined levels, we get the basic harmonic functions: tonic T — the chord at the first level — considered as the center, which is the subject to all other harmonic functions; dominant D — the chord at the fifth level — considered as the second most important part of the structure of harmony, and finally sub-dominant S, subdominant, considered as the lower dominant. Based on this premise, the research hereby presented discusses, precisely, in which measure touch and vision offer similar data to the cognitive system.
