Gametogenesis in the Sunray Venus *Macrocallista nimbosa* (Bivalvia: Veneridae) in West Central Florida in Relation to Temperature and Food Supply

Variations in SFAs and MUFAs in the present study could not be correlated with temperature. This scarce antiquarian book is a facsimile reprint of the original.

Acceptance of Sunray Venus Clams as a New Aquaculture Product in Florida

This may suggest dietary influences at the two sites. The Go-Getter — Book Review.

nimbosa, exhibits asynchronous spawning

During the course of the present study, an inverse relationship with n-6 PUFAs 20:4 n-6, 18:2 n-6 and a positive relationship with turbidity, chlorophyll a, and n-3 PUFAs was found. Although these species differ in FA profile, as noted previously, the profiles complement each other.

[PDF] Sunray Venus Clam: A New Species to Diversify the Florida Aquaculture Hard Clam Industry

Continuously collected environmental data indicated that spawning in females followed increased turbidity used as a phytoplankton proxy.

The sunray venus clam, *Macrocallista nimbosa*, exhibits asynchronous spawning

You have requested a machine translation of selected content from our databases. Initial observations on a new fishery for the sunray venus clam, *Macrocallista nimbosa* Solander by Randall J. Susan Laramore, Leslie Sturmer, Richard Baptiste, Huiping Yang, Carolyn Sinacore, and Elizabeth Urban-Gedamike.

Fatty acid composition of adult and larval sunray venus clams *Macrocallista nimbosa*: Environmental and gametogenic impacts.

Larvae were fed *Isochrysis galbana*, Tahitian strain Tiso. Concurrent with decreased PUFA n-6 levels, increases were observed in PUFA n-3 levels, primarily associated with increased levels of 20:5 n-3 females and 22:6 n-3 males. The findings will help existing hard clam growers to better determine if diversification into sunray venus clam culture is a sound business decision.

Clams collected offshore from sandy bottoms at Seahorse Key were found at a depth of 7-12 cm. The specific n-3 PUFA associated with these increases, however, varies by species and study: 22:6 n-3 Pazos et al.
