Results were compared with theoretical predictions based on the stress theory of fatigue notch sensitivity. Edwards has been a member of the ASME Board on Conformity Assessment since 1997, serving as ASME Vice President, Conformity Assessment from 2006 to 2009. He served as Associate Editor of ASME Transactions, JCISE, and is the Chief Editor of CAD.

Currently, he is a Program Director at the National Science Foundation, managing one of NSF's flagship cross-cutting programs, the IGERT PhD. His general interests include rotating flow, mechanical design, creativity tools, and sustainable energy system design. Thermal cycling of the system initiated fatigue cracks at the stiffener rings.

the 2010

His contributions to mechanical engineering, particularly in the area of alternative fuel combustion, IC engine knocking modeling, and flammability limits, are noteworthy and exemplary.
