Some poems have names on which we probably can rely attached to them, such as the heart-breaking and beautiful verses between Ausonius and Paulinus. The poems are, to be forthright, about Venus more than about Ceres, and Bacchus is by no means last. She has the most important of the translator's qualifications - a perfect empathy with her material.

Sadly there is no vocabulary nor grammatical notes as it's a reading book than a learning book, but it's a welcome collection to have. And this was no passing fashion. I just love parallel texts.
