Electrical and Electronic Components used in Projects

Electronic equipment saves our lives in other ways too.

This is where the comes in. The output from the timer IC is connected to an NPN transistor.

The relay coil gets energized as it is connected to proper supply and headlights get switched on. It is designed to protect the circuit from overloading or a short circuit.

Electrical and Electronic Components used in Projects

Transistor Latch Circuit The latch circuit is an electronic circuit used to lock its output. As a protective device, a circuit breaker can be controlled with a remote switch. In-circuit has a few components just two small NPN transistors, 2 resistors, and a transformer.

Electronic Components

Resistors Resistors are the commonly used components in the electronic circuits.

Introduction to Basic Electronics, Electronic Components and Projects

The other big difference between a microprocessor and a microcontroller, is that a microprocessor almost always runs on an operating system Linux, Android, Windows, etc.

Electronic Components

LEDs are used in numerous applications like keyboards, hard disks, TV remote controls, and these devices are very useful as status indicators in computers as well as battery-operated electronics Transistors.
