Representative subsets, in the form of core collection Frankel, 1984 or minicore collection Upadhyaya and Ortiz, 2001 , has been suggested as an entry point for germplasm utilization in crop breeding. Dvorak 2011 has discovered that as centers of diversity emerge they appear to parallel the evolution of the progenitor rather than the center of origin for the cultivated crop. Characterize at least 2,000 accessions per year utilizing phenotypic descriptors.
