Optimum meteorological and air pollution sampling network selection in cities (1978 edition)

A PM 10 filter weighing should occur prior to any Pb analysis. Monitoring organization means a monitoring agency responsible for operating a monitoring site for which the quality assurance regulations apply.

eCFR :: 40 CFR Part 58

An organization can conduct the performance evaluation PE if it can meet this definition and has a management structure that, at a minimum, will allow for the separation of its routine sampling personnel from its auditing personnel by two levels of management.

A measure of the amount of valid data obtained from a measurement system compared to the amount that was expected to be obtained under correct, normal conditions. A valid sample pair may be generated with as little as one valid FRM and one valid candidate ARM measurement per day. Field and laboratory personnel will be required to meet the performance evaluation field and laboratory training and certification requirements.

eCFR :: 40 CFR Part 58

The calculations for evaluating precision between the two collocated monitors are described in of this appendix. The audit is made by measuring the monitor's normal operating flow rate s using a flow rate transfer standard certified in accordance with of this appendix.

Тези доповідей конференції: sampling; Uncertainty; Soil

The audit is made by measuring the monitor's normal operating flow rate using a flow rate transfer standard certified in accordance with of this appendix. The bias estimator is based on the mean percent differences Equation 1.

Particulate Methods Continuous 4 method - collocated quality control sampling PM 2. The corrected concentration is obtained by subtracting the average of the atmospheric concentrations measured by the open-path instrument under test immediately before and immediately after the evaluation test or preferably before and after each evaluation concentration level from the evaluation concentration measurement.

As noted in , near-road NO₂ monitoring stations are required to be within 50 meters of target road segments in order to measure expected peak concentrations. The plan shall provide for these required monitors to be operational by January 1, 2013. If the verification is made in conjunction with a flow rate adjustment, it must be made prior to such flow rate adjustment.
