It is quite evident from the fact that you feel tired and lifeless whenever you feel depressed and energetic and lively whenever you are joyous and elated. Excessive alerts and subsequent overrides are also caused by inaccurate or outdated allergy information; inappropriate detection of cross-reactivity or sensitivity; and unnecessary triggers for mild, non-immune-mediated adverse drug reactions. However, the specific role of PEG in the

anaphylactic reactions to BNT162b2 and mRNA-1273 vaccines has not been analyzed so far.

However, a , showed that tailoring of asthma treatment based on FeNO levels was ineffective in improving outcomes in children and adults. Previous histories of allergic reactions, including drugs and contrast media, were described in most of the patients 90% , with previous anaphylaxis episodes in 5 out of 9 patients, including anaphylaxis to contrast media in two patients. Although the vaccines were administered to a higher percentage of women than men at the time of the analyses 61% in the case mRNA-1273 vaccine, and 64% for BNT162b2 vaccine , this fact cannot explain the high female predominance among the anaphylactic reactions.
