DIVE Homeschool Chemistry

Brief module description This module develops your previous study of a range of analytical techniques used in chemical analysis, and introduces you to new analytical techniques. Also make sure to finish any extra practice problems offered in section and on the lab-write-ups. You will get unlimited access to the course and recognition with a STEM certificate on successful completion.

Introductory Practical Chemistry I

This area is often a challenge for students.

Course structure

Student surveys and other feedback The Department of Chemistry surveys graduating seniors to gather data for assessment of program objectives.

Chemistry & Chemical Biology Undergraduate Student Learning Goals

Encouraged, I wanted to gather data about how effective this style of practical instruction was. Students will develop an understanding of the application of synthetic methodology in organic synthesis. You might meet our criteria in other ways if you do not have the qualifications we need.

Courses

Support during your course The Student Services Centre offers support and advice on money to students. We implemented this module in an undergraduate biology lecture course over six 50 min lessons in the fall semesters of both 2018 and 2019.

Integrated Courses

Here, we describe a hands-on medicinal plant chemistry laboratory module Phytochemical Laboratory Activities for i Ntegrative Thinking and Enhanced Competencies; PLANTEC for undergraduates that targets the development of core competencies in i logical thinking and analysis of text and data, ii interdisciplinary and systems thinking, iii oral and written communication of science, and iv teamwork and collaboration.

Chemistry (BSc)

Your models will reveal important properties of the molecules, like the spatial relationships between different atoms, or how easily a bond can rotate. Modules may also be limited due to timetable clashes, and although the University works to minimise disruption to choice, we advise you to seek advice from the relevant School on the module choices available. This module will build upon the Work-based learning and development module at level 4.
