Full text of to the whales, porpoises, and dolphins (order Cetacea), exhibited in the Department of Zoology, British Museum (Natural History)

Ramsay 1877, there are 107 land birds, viz. This is an extremely interesting specimen, because the pore-areas are circumscribed, and open, through the subdermal cavities, directly into the large excretory canals, which present the circular folds to which I have alluded throughout their course, so that by these folds they can be unmistakably traced from the pore-areas to the vents, that is, from one end to the other fig.

Epaxial and hypaxial muscle groups are massive, with several muscles joining and breaking apart. As the annual amount of heat received by the earth from the sun varies inversely as the length of the minor axis, it follows that the greater the eccentricity the greater is the total amount of heat received from the sun.

The antennae in my specimen agree with the description of M. Pascoe on new Asiatic Longicornia. Reproduction Conception in South African waters is proposed to occur from April through September and parturition from December through March.

Checklist of South Asian Mammals

From its rolled or rounded form it was evidently a beach-specimen, and coming from Port Elliot, was obtained from the same coast, and not very far from that last mentioned.

An Anatomical and Phylogenetic Study of the Osteology of the Petrosal of Extant and Extinct Artiodactylans (Mammalia) and Relatives

{TJie Chdde -boohs can be obtained only at the Museum. We scanned at a rate of two frames per second and completed several scans to cover the surface of each side. AU - Günther, Albert C.

An Anatomical and Phylogenetic Study of the Osteology of the Petrosal of Extant and Extinct Artiodactylans (Mammalia) and Relatives

The two maxillae would likely have contacted each other at the midline possibly with the anterior portion of the vomer visible near the mesorostral groove , but we cannot be certain because of the missing portion of the right maxilla. Nautilus, from the interior of New Caledonia, together with a fragment of bone. Two studies have discussed the taxonomic position of Megaptera miocaena in detail.
