## Mapping the cortical representation of speech sounds in a syllable repetition task

For example, in some languages a sound may only be used at the ends of words and not as a word-initial sound. One should be aware of the fact that placing the microphone at this short distance results in a recorded spectrum that is different from the natural and neutral spectrum perceived at a normal listening distance. A lot of research has been carried out in this area.

## The 44 Phonemic Sounds in English for Spelling

In this case, all signals other than the speech itself can be considered noise.

## A note on the entropy of words in printed English

Standards for the diagnosis of SLI vary and therefore prevalence estimates across studies vary accordingly. Remember that these sounds are not necessarily indicative of spelling.

## Mapping the cortical representation of speech sounds in a syllable repetition task

Here, the frequency band around 2 kHz is the most important frequency range regarding perceived intelligibility. The levels were measured at 1 meter.
