## Microtus

. Dearden 1958:543 described and figured the bacula of six subspecies of *Lagurus curtatus* and two Asiatic species, *Lagurus lagurus* and *Lagurus luteus*.

All these effects have been found or claimed by rodent ecologists e. Circles show presence of ossification in stalk only; circles enclosing dots indicate presence of secondary ossification in median process also; large dots indicate the addition of tertiary ossification in one or both of the lateral digitate processes.

## Humboldt Marten Species Profile

Most of us recognize mammals easily — they have fur, are warm-blooded, nurse their young, and breathe air.

## Chromosomes of six species of New World microtine rodents, Mammalia

Within the single subgenus *Microtus* some individuals of *Microtus mexicanus*, for example, have minute ossified lateral processes and other individuals lack these processes; *Microtus pennsylvanicus* and some other species have proportionately large lateral ossifications. Length of stalk usually less than 3. If you received the work on a physical medium, you must return the medium with your written explanation.

The fraction of populations with summer declines in numbers, characterizing highly cyclic populations, increased in the same way. Quay, from Mary's Peak, Benton Co.

## Microtine rodents lemmings and voles

It is certain, however, that at various times, both early and late in the evolution of the subfamily, representatives have crossed from Eurasia to

North America or vice versa.

More recent phylogenetic analysis using mitochondrial genetic markers has confirmed its closer relationship with M.
