Frequently Asked Questions

The western coral snake's bright markings are warning colors aposematic colors --they serve notice that the snake is dangerous. CDC is not aware of any scientific reports of the virus being spread by swallowing or coming in contact with water contaminated by feces from an infected person.

Saguaro National Park (U.S. National Park Service)

Have each student use his or her own breathing barrier when doing rescue breathing on a manikin.

Saguaro Cactus

Aside from outcompeting local flora for natural resources, these invasive species are also highly flammable, causing and propagating wildfires rapidly. It is up to you to decide if you download an exposure notification app for COVID-19. Exposure notification apps are developed in collaboration with or endorsed by health departments.

Pfizer

Bat populations could be further threatened by the disease itself or by harm inflicted on bats resulting from a misconception that bats are spreading COVID-19. Left alone, an animal bone will be gnawed by desert rodents to recover its calcium.
